

Self-hosted · permissionless

KPay

Accept anything.

Auto-settle on Solana.

Self-hosted private payment infrastructure for humans & AI agents. Card and crypto in, USDT on Solana out.

Live product · demo video inside

Money moves in seconds. Merchants wait days

Settlement, cost and control are still broken for global merchants

Slow settlement

Bank rails settle T+1 to T+3, with weekend and holiday cut-offs. Working capital is stuck in transit.

Costly cross-border

FX spreads, correspondent and wire fees stack up, and high-risk or emerging-market merchants pay the most.

Rented infrastructure

Hosted gateways own your data, pricing and uptime. Crypto processors skip cards and UPI entirely.

KPay: one gateway, settled on Solana

Accept every local method, account for every cent, settle in USDT within seconds

Fiat & crypto in.
USDT out.
On your servers.

Every payment method a merchant needs, converted at a locked oracle quote and paid out as USDT to the merchant's own Solana wallet — no bank cut-off, no weekends.

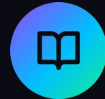

Accept

Cards, UPI, Solana Pay, and USDT on Tron, Ethereum, Polygon, BNB Chain

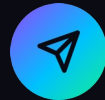

Merge

Other-chain USDT is swept and bridged straight into the Solana treasury

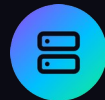

Account

Append-only double-entry ledger, MDR + tax per rule, rolling reserve, FX buffer earned on conversion

Settle

USDT auto-settles to the merchant Solana wallet; approval only above threshold

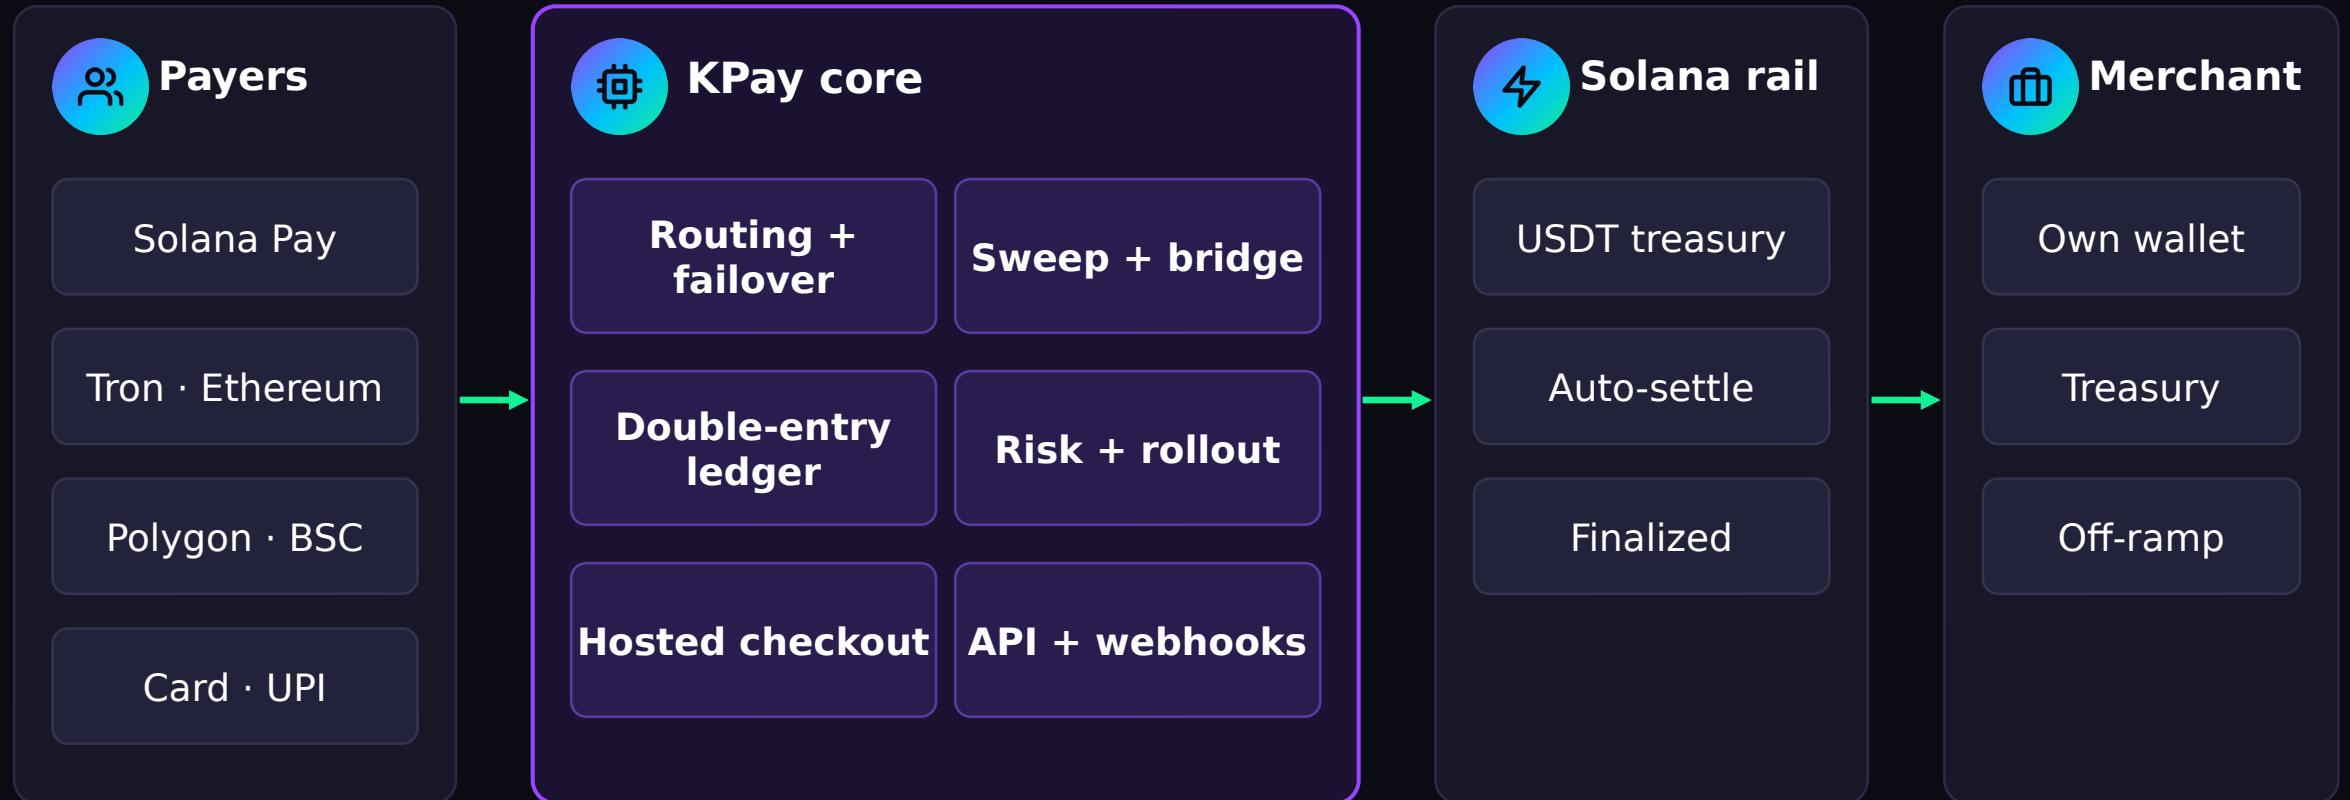

Own it

Self-hosted in your VPC with your keys. Commercial licence, closed source

How KPay works, end to end

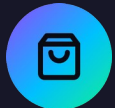

From any payer to a finalized USDT settlement in the merchant wallet

Everything above runs in your VPC · your keys (MPC / HSM) · your data · one licence

One install, four levels of use

The same gateway scales from one brand to a regulated bank

L1 · Merchant

One brand, own checkout

Links + API

L2 · Platform

Marketplace onboards sellers

Onboarding + approval

L3 · PSP

White-label for its merchants

Reseller + routing

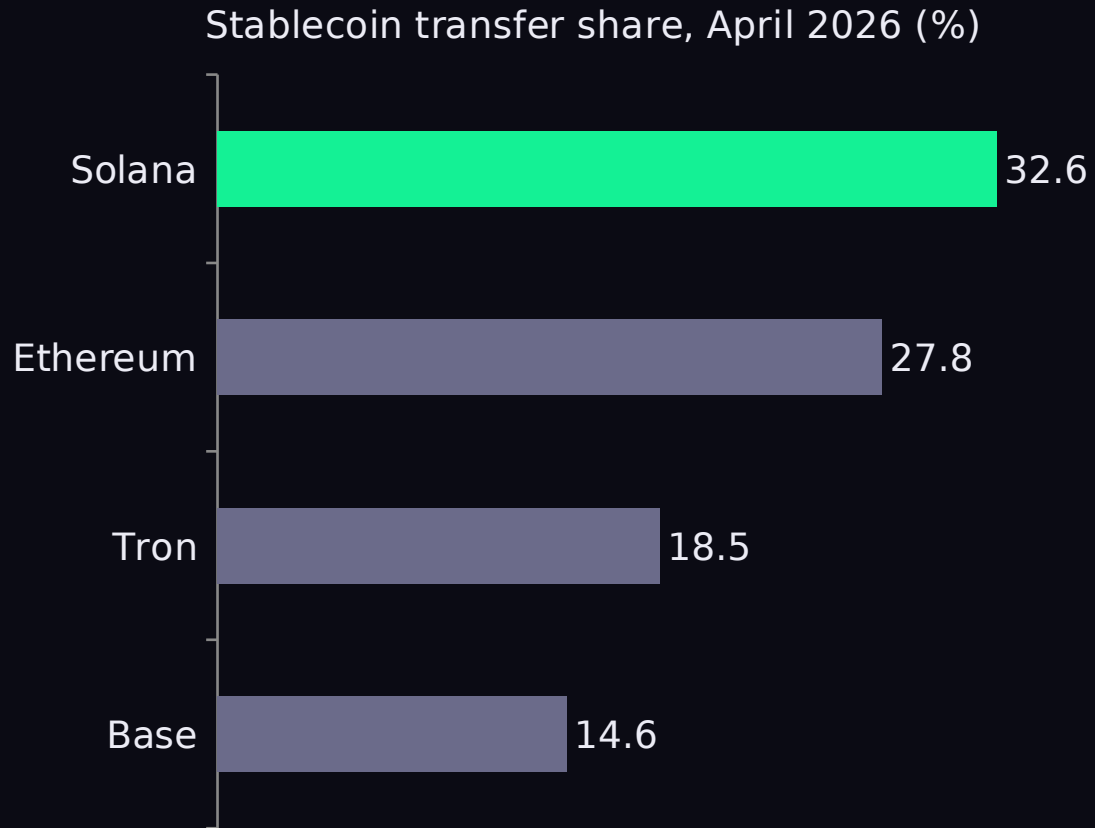

L4 · Bank

Regulated, multi-region

HSM keys + residency

Why Solana is the settlement layer

Stablecoin payments have already moved here

\$650B

stablecoin transfers
on Solana in Feb 2026

400 ms

slot time; Alpenglow
targets ~150 ms
finality

≈\$0.001

base network fee per
settlement transfer

Visa

settles USDC with US
banks on Solana

Sources: Blockeden.xyz (Artemis data), Mar-Apr 2026; Visa, Dec 2025. Figures rounded.

What only KPay does

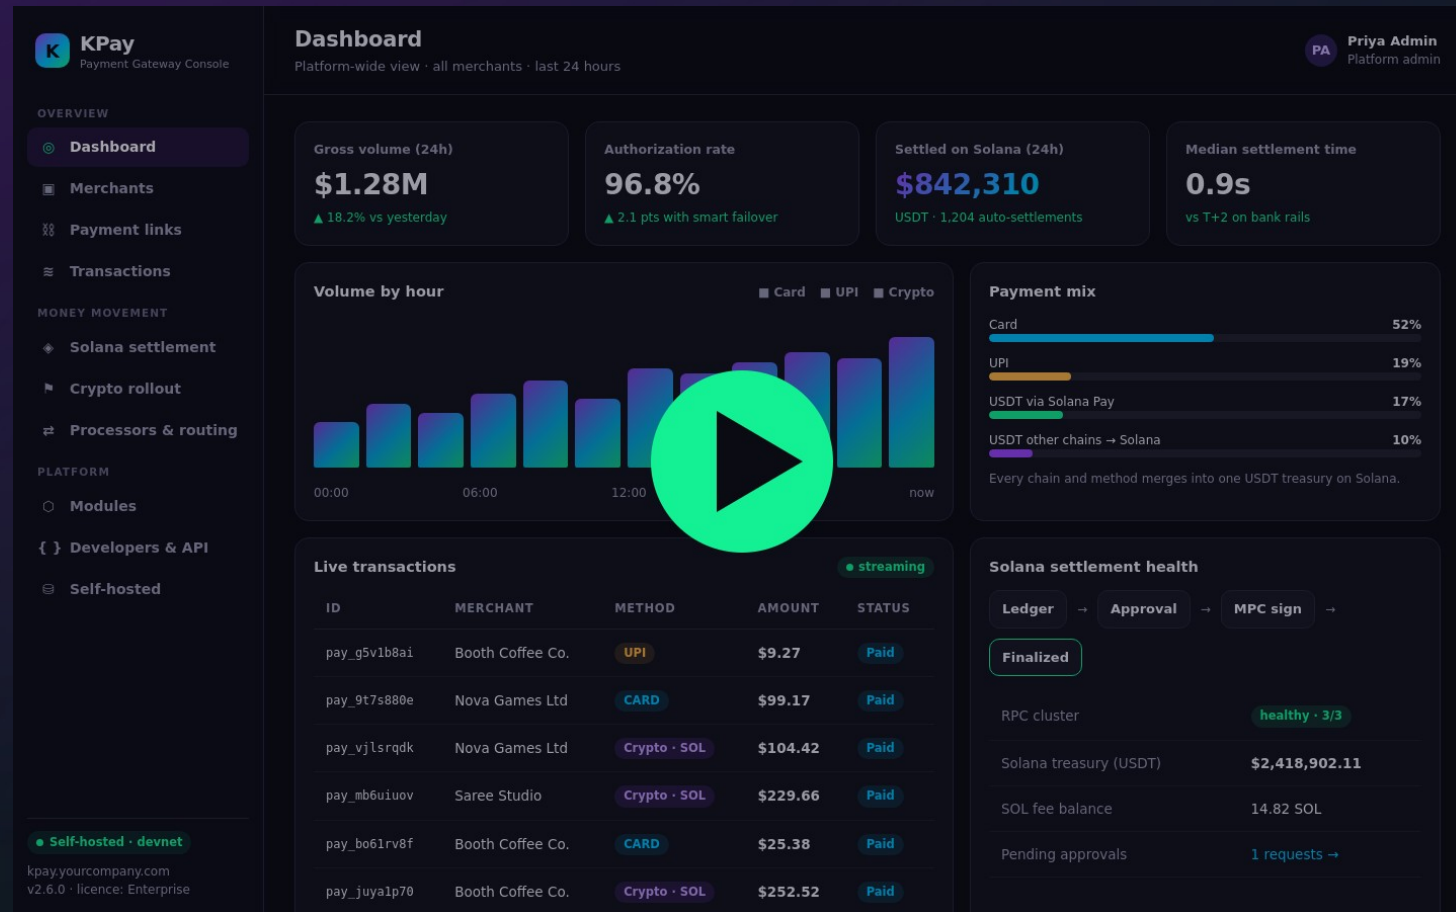

The only self-hosted gateway that takes fiat and crypto in and settles on Solana

Capability	Hosted card gateways	Crypto-only processors	KPay
Self-hosted in your own VPC, your keys	○	○	●
Cards + UPI + stablecoins in one checkout	◐	◐	●
Any chain in, merged and auto-settled on Solana	○	◐	●
Double-entry ledger + chain-verified finality	◐	○	●
Multi-processor routing with failover	◐	○	●
Governed crypto rollout: cohorts, caps, kill switch	○	○	●

● full ◐ partial / limited ○ not offered

Admin login

One identity source for platform admins and merchants

KPay
Private payment Infrastructure

Self-hosted · private · permissionless

Payment infrastructure for humans & AI agents.

Accept card and crypto payments on infrastructure you own and control. Every chain auto-settles as USDT on Solana.

~0.4s
Solana slot time

<\$0.001
per settlement tx

24/7
settlement, no bank cut-off

Sign in to KPay

One login for platform admins and merchants.

EMAIL
you@company.com

PASSWORD

Sign in

Argon2 hashed · logout · MFA enforced for admins

Unified login

One URL resolves admin and merchant contexts

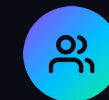

Argon2 + logout

Brute-force protection on every account

MFA enforced

TOTP or WebAuthn for every admin

Roles + IP rules

Five platform roles, IP allow-list

Merchant onboarding

Four guided steps, then a mandatory admin approval

The screenshot shows the 'Onboard merchant' interface for KPay. The 'Business profile' step is active. The form includes fields for 'LEGAL BUSINESS NAME' (Lumen Labs Inc.), 'COUNTRY OF INCORPORATION' (United States), 'BUSINESS EMAIL' (finance@lumenlabs.io), 'WEBSITE' (https://lumenlabs.io), 'CATEGORY (MCC)' (5734 - Computer software stores), and 'EXPECTED MONTHLY VOLUME' (\$50k - \$250k). A 'Continue' button is at the bottom right.

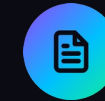

The screenshot shows the 'Onboard merchant' interface for KPay. The 'KYC documents' step is active. It displays four verification status boxes: 'Certificate of Incorporation verified - OCR + liveness passed', 'Director ID (passport) verified - OCR + liveness passed', 'Proof of address verified - OCR + liveness passed', and 'Bank / wallet ownership proof verified - OCR + liveness passed'. A 'Continue' button is at the bottom right.

The screenshot shows the 'Onboard merchant' interface for KPay. The 'Methods & processors' step is active. It lists payment methods and processors with their status and priority. The table is as follows:

PAYMENT METHODS	Card	UPI	Stablecoins (Solana Pay)	
CARD ACQUIRER (PRIORITY ORDER — FAILOVER IS AUTOMATIC)				
Card Acquirer	Visa, Mastercard, Amex — 13 currencies	Card	Priority 1	On
UPI Rail	India UPI collect + intent, QR	UPI	Priority 1	On
Solana Pay	USDT SPL pay-in, reference-tracked	Crypto	Priority 1	On
Multichain — Solana	USDT on Tron, Ethereum, Polygon, BSC, auto-merged to Solana	Crypto	Priority 2	On
Backup Card Acquirer	Fallback route for Backlink & Instapay	Card	Priority 2	On

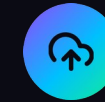

A 'Continue' button is at the bottom right.

The screenshot shows the 'Onboard merchant' interface for KPay. The 'Solana settlement' step is active. It displays the 'MERCHANT SETTLEMENT WALLET (SOLANA ADDRESS)' (52wJ7a1t8tMjBESHGyLkshuXageY9SYCfshgAgP), 'SETTLEMENT ASSET' (USDT (SPL) — all chains merged), 'SCHEDULE' (Auto-settle (approved above \$25,000)), 'MDR (CARD / UPI / CRYPTO)' (2.4% / 1.2% / 0.8%), and 'ROLLING RESERVE' (5% - 90 days). A 'Submit for approval' button is at the bottom right.

1 • Business profile

Legal entity, MCC, expected volume

2 • KYC documents

OCR, liveness, sanctions and UBO checks

3 • Methods & processors

Card, UPI, Solana Pay, with failover order

4 • Solana settlement

Merchant wallet verified on-chain

Admin approves

Maker-checker gate, then the merchant goes live

--set solana.rpc=\$RPC_URL \
--set custody.provider=mpc

Licence

Edition	Enterprise · self-hosted
Source	Closed source, escrow available
Data residency	100% in your VPC
Keys	Your MPC / HSM — KPay never holds funds
Updates	Signed releases · migrations included

Docker + Kubernetes

Signed images, Helm chart, migrations included

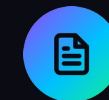

PostgreSQL 16 + Redis 7

Your database, your region

Your MPC / HSM

KPay never holds merchant funds

Commercial licence

Closed source; escrow for enterprise

Business model

Recurring licence plus usage that grows with settled volume

Licence

Annual, per deployment,
tiered L1 to L4

Usage

Basis points on volume
settled on Solana

Enterprise

SLA support, white-label
onboarding, escrow

Operators keep their own economics. MDR per method and the FX buffer on conversion are earned inside each deployment and reported per asset in Platform Earnings. KPay never sits in the flow of funds.

Roadmap

From demo to every operator on Solana

Now · demo

- Solana Pay USDT checkout
- Other-chain USDT merged to Solana
- Auto-settle USDT to merchant wallets
- Onboarding, rollout, routing

Q4 2026

- Mainnet pilot with design partners
- Bridge routes hardened per chain
- Pyth in the oracle quorum
- Devnet sandbox for integrators

2027

- Token-2022 stablecoins (PYUSD, USDG)
- Alpenglow-era sub-second finality
- Off-ramp partners in India, SEA, MENA
- White-label PSP program

Own the stack. Settle on Solana.

KPay brings every PSP, platform and bank that installs it onto Solana as a settlement layer.

Our ask to the Solana ecosystem

Grant + co-marketing

Ship the Solana settlement rail GA

Stablecoin + off-ramp intros

Issuers and local off-ramp partners

RPC infrastructure

Dedicated RPC for self-hosted installs

Pilot merchants + PSPs

Five design partners for Q4 2026
